PRODUCT INFORMATION

I.F.O.L.6

Fire Omnidirectional Loudspeaker

The **INTAK** IFOL 6 is a high quality, vandal resistant, voice evacuation system compliant bi-directional cabinet loudspeaker.

For ease of installation the back enclosure is equipped with separate in/out ceramic terminal blocks, which allow the cables to be terminated at first fix, and thus allow full cable testing to take place. The front cover can then be fitted at a later date.

The back box is equipped with multiple mounting facilities for connection directly to number of different style conduit boxes, etc. alternatively two pilot holes provide easy glanding facilities.

Unlike most other bi-directional loudspeakers on the market this unit actually has two twin cone drivers, rather than just one.

The loudspeaker is unique in being fitted with a UK made transformer, and is fully compliant with BS5839 part 8.
